### **Course Overview**

Economics is a social science that studies choice behavior. Microeconomics is a branch of economics in which the focus of the analysis is on individuals; it deals with how individual consumers, households, and firms make choices, primarily in a market setting.

This introductory course will expose you to the fundamental concepts in microeconomics and introduce you to the essential analytical tools economists use to analyze decision makings. How these individual choices interacted to determine the market outcomes will also be covered. At a higher level, this course introduces you to the economists' way of thinking.

#### **Course Goals**

Upon finishing the course, you are expected to be able to:

- 1. Demonstrate understanding of the basic concepts in microeconomics, which include marginal analysis, market equilibrium, market efficiency, and market failure; and;
- 2. Demonstrate the ability to apply the basic tools of microeconomics to analyze simple economic and social phenomena.

#### **Grading Policy**

Problem Sets (x4)	20%
