## Course Overview

Economists use theoretical models (simplified representations of the real world which often involve the use of mathematics) as a tool to study and analyze economic behavior in a systematic and logically consistent way. This course exposes you to a set of models that economists use to study microeconomic behavior in a market economy, i.e., the behavior of individuals (e.g., consumers, households, and firms) who interact with each other in the marketplace.

## Learning Outcomes

Upon completion of this course, students should be able to

1. Analyze competitive market outcomes using supply-and-demand model.
2. Analyze consumer and firm behavior from the perspective of constrained maximization.
3. Analyze strategic interaction among individuals using basic concepts in game theory.
4. Analyze decision under uncertainty with the aid of basic probability theory.
5. Explain the economic intuition behind the theoretical models.

## Grading Policy

Problem Sets (×4)	20%
Midterm exam	40%
Final exam	40%

## Grading Scale is as follows

Number grade	Letter grade	GPA
