

CS411 Applied Algorithm

Instructor Information	Quan Li Home Institution: Shanghai Tech University Email: qliba@connect.ust.hk Office Hours: Determined by Instructor			
Term	December 13, 2021 - January 7, 2022	Credits	4 units	
Class Hours	Monday through Friday, 120 mins per teaching day			
Discussion Sessions	2.5 hours each week, conducted by teaching assistant(s)			
Total Contact Hours	66 contact hours (1 contact hour = 45 mins, 3000 mins in total)			
Required Texts (with ISBN)	 Algorithm Design, Jon Kleinberg and Eva Tardos. Pearson, ISBN:9780321295354 Introduction to Algorithms (3rd Edition), Thomas H. Cormen/Charles E. Leiserson/Ronald L. Rivest / Clifford Stein 			
Prerequisite	Introduction to Programming Algorithms and Data Structures Probability and Statistics			

Course Overview

Applied Algorithm is a required course for both undergraduate and graduate students majoring in computer science. It teaches advanced algorithm design and analysis skills. The contents include: the basis of algorithm analysis, greedy method, divide-and-conquer method, dynamic programming, network flow, computational complexity category, amortized analysis, approximation algorithm, randomized algorithm, and local search.

Course Goals

1. Knowledge cognitive ability: master basic ideas and main skills of algorithm design and master the skills of analyzing and proving all kinds of algorithms.

2. Able to apply the learned knowledge to solve specific problems; understand the category of algorithm complexity and other theoretical knowledge, and the analysis of specific problems.

3. Comprehensive quality and ability: able to understand engineering professional ethics and norms, with scientific spirit and basic literacy of engineers.

Personal Strategic Plan

The knowledge points of this course are mainly taught in class, covering the main methods and techniques of algorithm design, the basic ideas and skills of algorithm analysis, and the important conclusions and methods of algorithm and complexity theory, so as to guide students to master algorithm design and analysis comprehensively and deeply.

Homework, and Exams

There will be 5 homework assignments, which are tailored towards helping students master the key concepts covered in class. There will be one mid-term and one final exam. Test questions will be covered both in the textbook and in class.

Academic Integrity

This course attaches great importance to academic integrity, and plagiarism and cheating are strictly prohibited.

Grading Policy

Mid-term Exam	35%
Homework	30%
Final Exam	35%

Grading Scale

Number grade	Letter grade	GPA
90-100	А	4.0
85-89	A-	3.7
80-84	B+	3.3
75-79	В	3.0
70-74	В-	2.7
67-69	C+	2.3
65-66	С	2.0
62-64	C-	1.7
60-61	D	1.0
≤59	F (Failure)	0

Class Schedule

Date	Lecture	
Day 1	Course Overview, Asymptotic Analysis	
Day 2	Greedy Algorithm	
Day 3	Greedy Algorithm, Divide and Conquer	
Day 4	Divide and Conquer, Dynamic Programming (HW1 released)	
Day 5	Dynamic Programming	
Day 6	Network Flow	
Day 7	Network Flow (HW2 released and HW1 due)	
Day 8	P and NP	
Day 9	P and NP	
Day 10	PSPACE (HW3 released and HW2 due)	
Day 11	Mid-term Review and Exam	
Day 12	NP-Hard	
Day 13	Approximation Algorithm	
Day 14	Approximation Algorithm	
Day 15	Randomized Algorithm (HW4 released and HW3 due)	
Day 16	Randomized Algorithm	
Day 17	Amortized analysis	
Day 18	Local Search (HW5 released and HW4 due)	
Day 19	Final Review	
Day 20	Final Exam (HW5 due)
